Subject: Recent activities on the prospective case study
Date: 03/01/2012 01:55 PM

Hi Jeanne,

As we discussed earlier, here are the recent activities on the prospective case study in Region 6.

7 Feb 2012

Meeting in DC with Chesapeake. They proposed sites in the Eagle Ford Shale (Texas), Colony Granite Wash (Oklahoma), and Mississippi Lime (Oklahoma) as alternative sites.

9 Feb 2012

Meeting in Oklahoma City. Reviewed over a dozen specific well locations. Narrowed down to two in the Mississippi Lime, one in Oklahoma and one in Kansas

10 Feb 2012

Notified LDEQ and LDNR that the DeSoto Parish site would no longer be pursued due to schedule conflicts

17 Feb 2012

Conference call to follow-up on sites in Oklahoma and Kansas. Agreed to conduct site visit the following week.

22 Feb 2012

Conducted site visit.

1 March 2012

Conference call to confirm Oklahoma site is the probable location, pending initial GeoProbe confirmation of aquifer presence. Agreed EPA will provide synopsis of GeoProbe activities by COB on 2 March 2012 and Chesapeake will pursue access from landowner, with a target for conducting activities in two weeks. EPA will also deliver by this afternoon a tech memo on design and installation of monitoring wells using either horizontal drilling or below pad installations.

NEXT ACTION

14 March 2012

Conference call to get feedback from Chesapeake on well designs and schedule call with driller to answer questions. Also confirm access for GeoProbe activities
